KernelCare
Live patching for Linux servers

Product   Pricing   Blog   Contact   Free Trial

Keep your Linux servers patched and running, with no reboots or interruptions.

KernelCare is a SaaS application that patches Linux server kernels with no reboots. It installs the latest security patches automatically, so your servers stay secure and compliant.

Kernel Care's new Plus variant patches shared libraries, and a new IoT version patches the kernels of embedded ARM-based devices. Want to know more? Just click the button below.
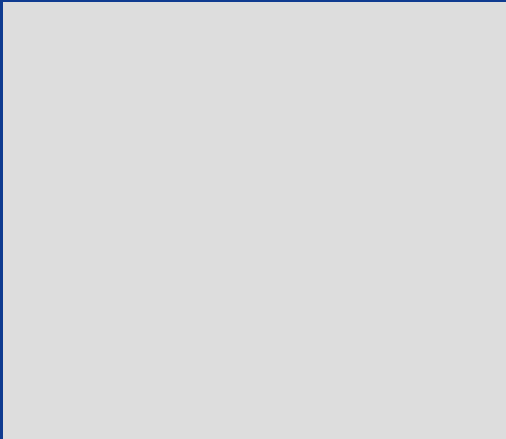

Learn more about KernelCare >>

KernelCare is used by over 1500 companies running Linux-based web servers, including:

LiquidWeb

"We have come to consider KernelCare an essential service. The downtime that reboots cause can be easily avoided with KernelCare."

- Joe Osterling, CTO

Glexia

"Any time we've had an issue, we've had a response within hours...I wouldn't go anywhere else."

-Michael Williams, President/CEO

Efinity

"We tested it, but to be honest, it wasn't very exciting. It just *worked*."

-Andrzej Talarek, Java Developer
